

## Project Design Phase-I Solution Fit

Project Name      Retail Store Stock Inventory Analytics

### Problem – Solution Fit:

Problem-solution fit is a term used to describe the point validating that the base problem resulting in a business idea really exists and the proposed solution actually solves that problem. Various aspects and requirement of the customer is initially identified to develop a better solution. Based on the problem, triggers, causes, constrains the proposed model is developed with the use of data analysis, image processing and data science. Inventory management, channel of communication, marketing strategy are deduced based on prediction and automation.
